C3 Study design

Research-doctorate dissertations | Complete observed profiles

Unit: one distinct work, counted once | Clear combined funding-connection definition

Identified NIDA/NIAAA funding connection

Remaining works

Full observed population

Observed, ownership exclusion

Full: connected n=3,214; remaining n=4,492.

Ownership exclusion: connected n=3,213; remaining n=3,940.

Connection: a clear NIDA/NIAAA-funded advisor or committee PI association or a clear individual-award association, or both. PI windows are five preceding fiscal years for research doctorates and two for master's, excluding completion FY. Award windows run from first observed funding FY through last observed funding FY plus three, clipped to 2010-2023.

Ownership exclusion removes whole institutions ever identified as for-profit; unknown ownership is retained. Remaining works include missing or unmatched evidence. No identified connection is not verified absence of support.

Categories are exclusive within each outcome. Missing, inapplicable or undetermined outcomes are excluded; valid rare categories are retained. These are observed corpus descriptions, with no intervals or model adjustment.

C8 Data type

Research-doctorate dissertations | Complete observed profiles

Unit: one distinct work, counted once | Clear combined funding-connection definition

Identified NIDA/NIAAA funding connection

Remaining works

Full observed population

Observed, ownership exclusion

Full: connected n=3,230; remaining n=4,639.

Ownership exclusion: connected n=3,229; remaining n=4,070.

Connection: a clear NIDA/NIAAA-funded advisor or committee PI association or a clear individual-award association, or both. PI windows are five preceding fiscal years for research doctorates and two for master's, excluding completion FY. Award windows run from first observed funding FY through last observed funding FY plus three, clipped to 2010-2023.

Ownership exclusion removes whole institutions ever identified as for-profit; unknown ownership is retained. Remaining works include missing or unmatched evidence. No identified connection is not verified absence of support.

C8 forms overlap, so shares can total above 100%. Missing, inapplicable or undetermined lists are excluded; valid unselected forms count as zero. These are observed corpus descriptions, with no intervals or model adjustment.
